

# EUROP-AI

Simple, Fast & Easy Web Solutions / Apps for your Organisation

# Start a journey with us...

# KEY VALUES AND STEPS

## Clear Context and Focus

Addressing your specific issues and opportunities to use web solutions for a specific STEP of your processes with clear success conditions and deadlines

## Fast Time2market

Implement quick and effective development with iterative and agile building models without conceptual or technical excuses and integrating all your financial and human parameters

## Strong Compliance

Thoroughly understanding and applying European rules and guidance to ensure protection of individual data and security of public data in terms of collection and access

## User friendly data access

All our solutions allow you realtime and fluid collection, aggregation and monitoring of data with a potential of increased customer-user personal relationships

## Accelerated Growth

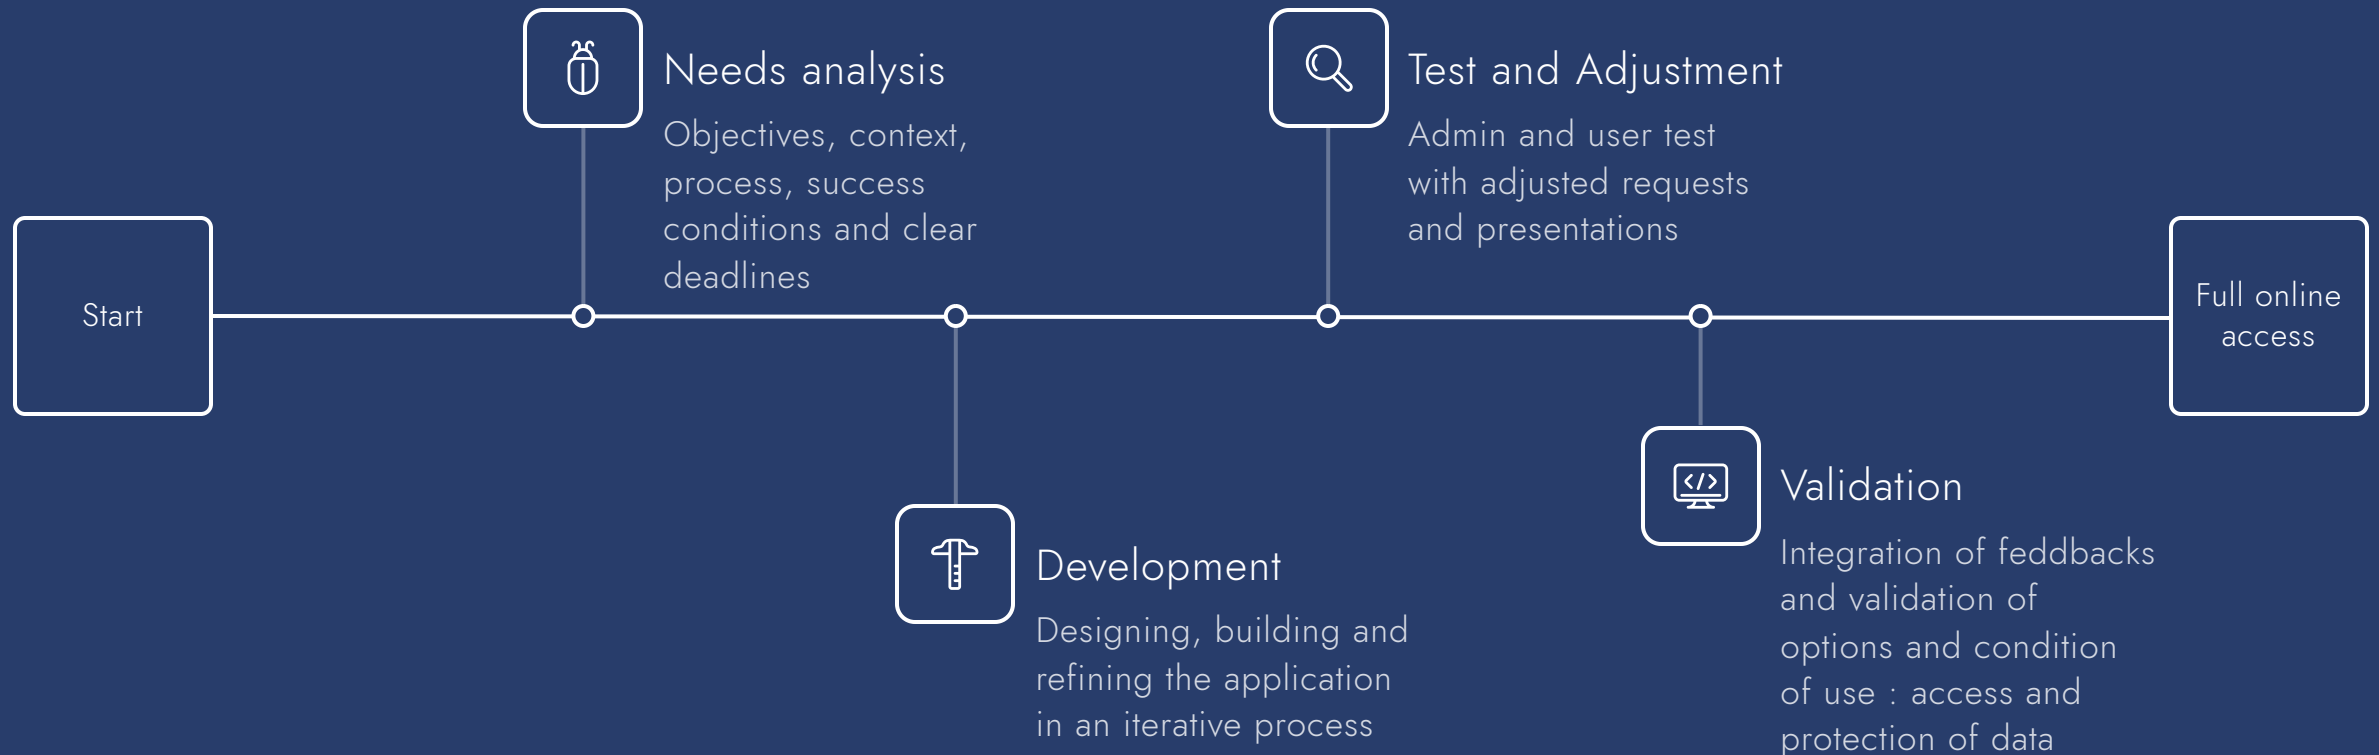

Growth in services and users are made possible by providing scalability of automated real-time solutions to collect data, check deadlines, send reminders, backups and alerts on gaps

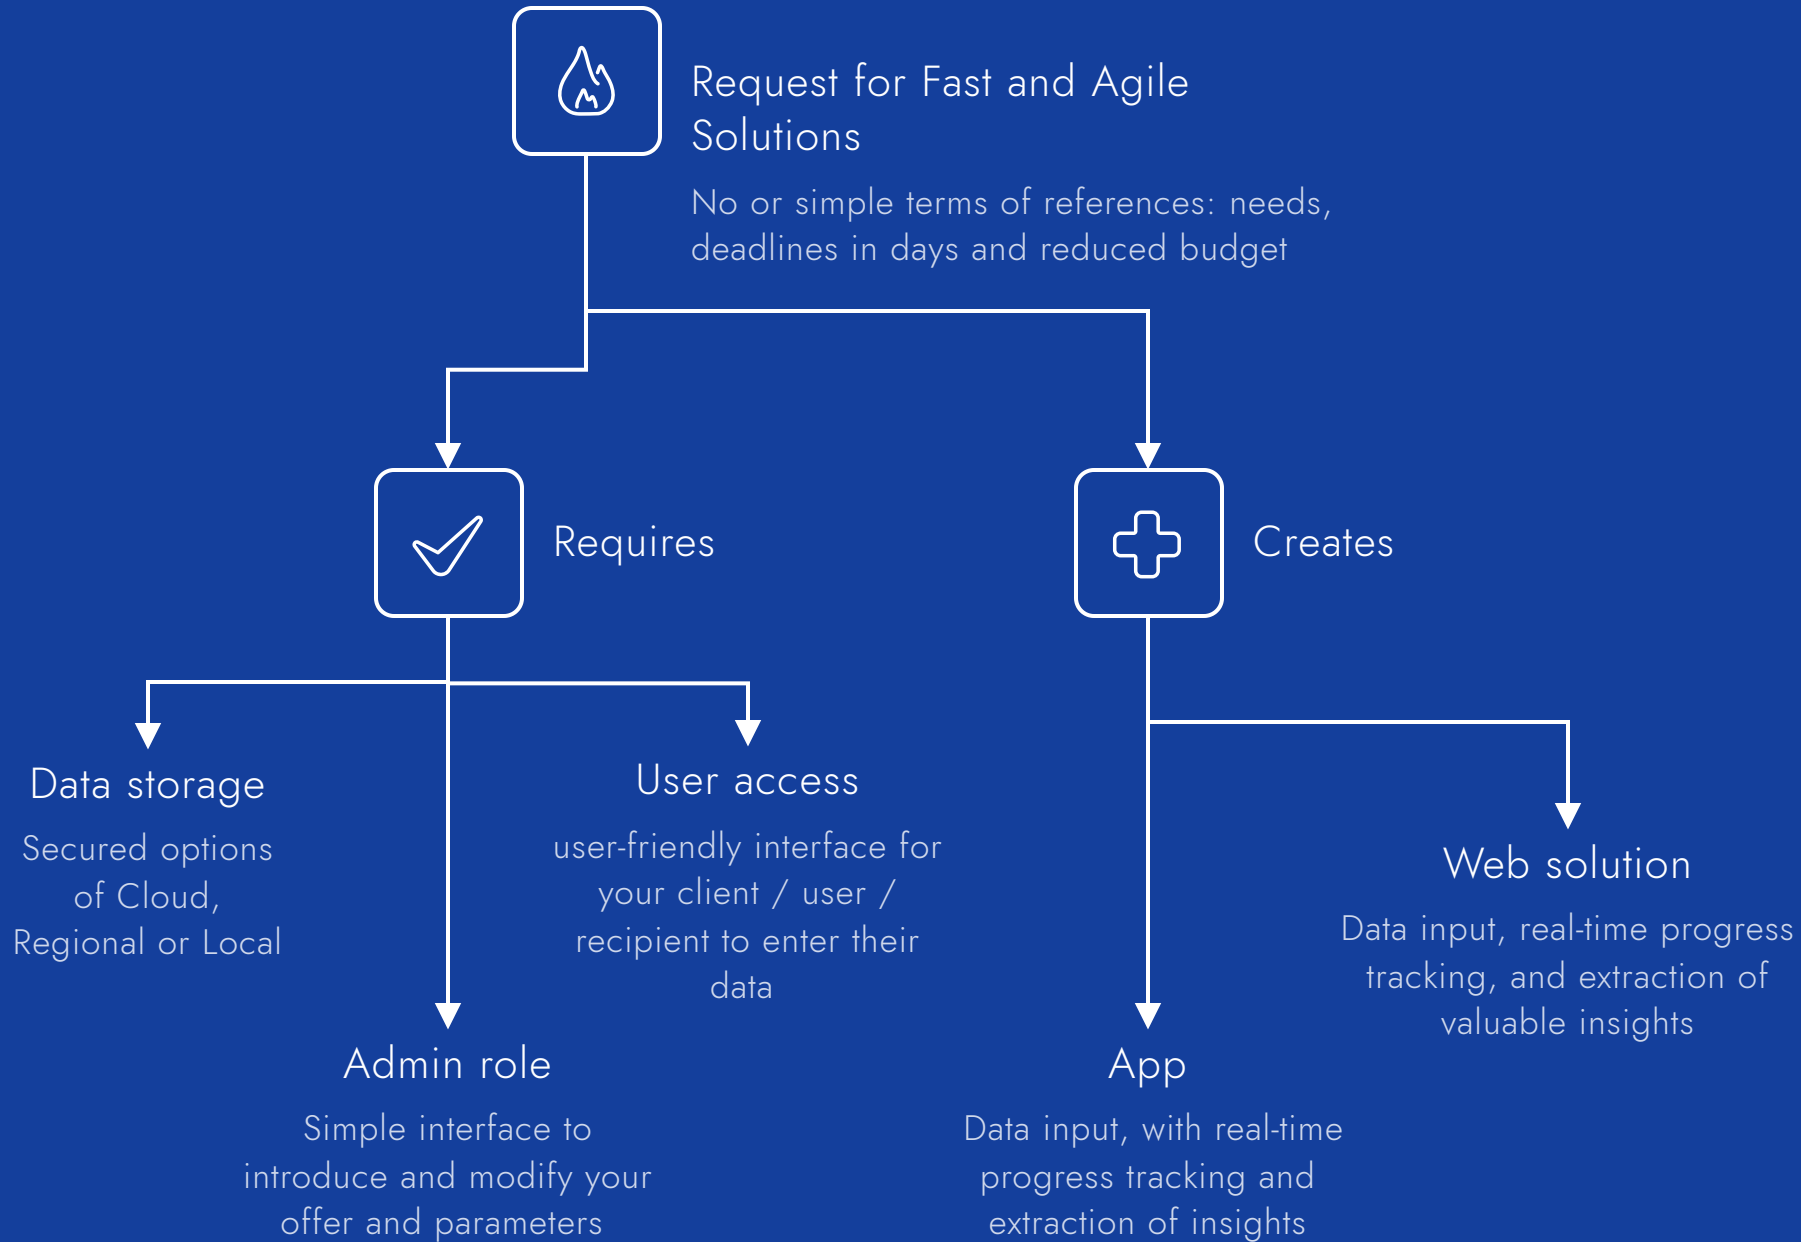

## Easy and Extendable products

Our agile solutions are always tailor made and flexible being easy and ready to use which would be impossible using conventional tools and processes

# YOUR PRODUCTION PATH WITH US

Iterative, Agile and Fast creation and improvement of your data management solutions

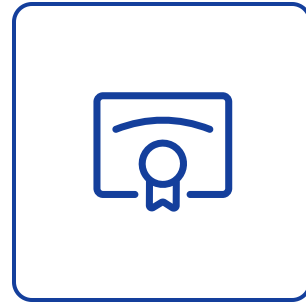

# KEY EXAMPLES OF APPLICATION POINTS

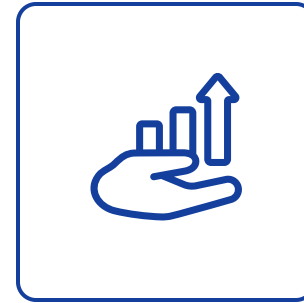

## Booking system

Setting a specific registration/booking system of products and services allowing you real-time monitoring of the orders / use of the services

## Feedback Collector

Testing the gain of satisfaction / qualifications and knowledge and monitoring the progresses and feedbacks of the participants to events / services

## Performance Tracker

Tracking the achievements and making the right monitoring of the financial and human resources in line with your milestones and process

## Risk-management system

Alerting you on the potential risks and risk factors in line with your intervention and scoring the most risky projects, expenditures or files

These examples are demonstrating the interest of applying tailor made web solutions for specific points and needs of data management. By applying this you are improving your relationship with your clients/users with possible integration to your general IT system and website .
